Assignment AT-2

1) Student Performance Analysis:

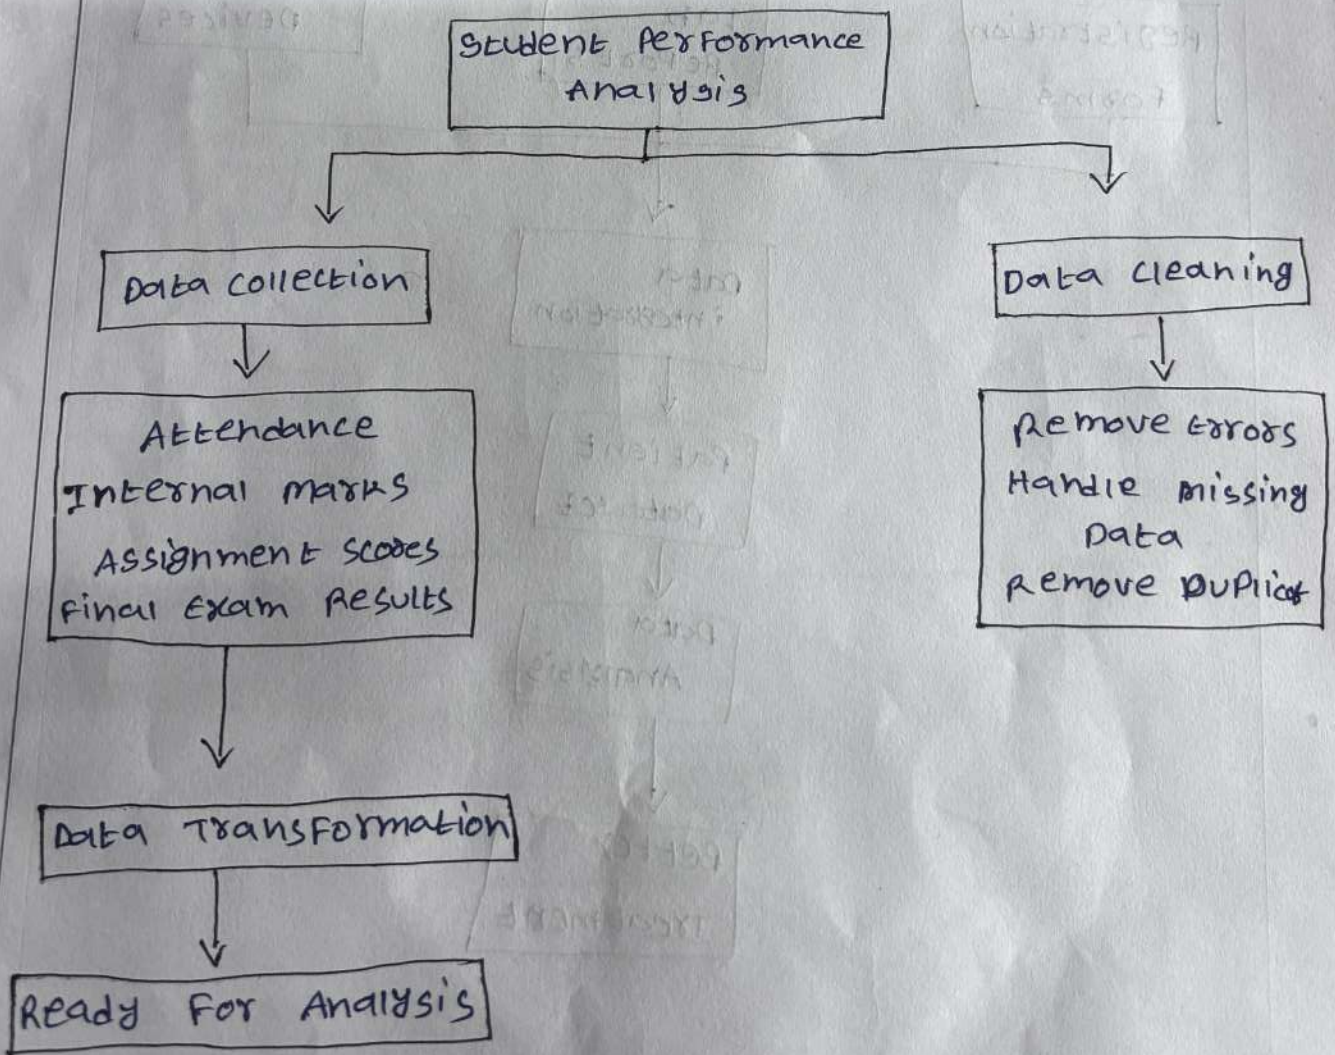

Definition:

Data collection:- Gathering relevant data from different sources for analysis

Data cleaning:- Removing errors, missing values, and duplicate data.

Data Transformation:- Converting data into a suitable format for analysis

Concept map:-

2) Hospital Patient Data:-

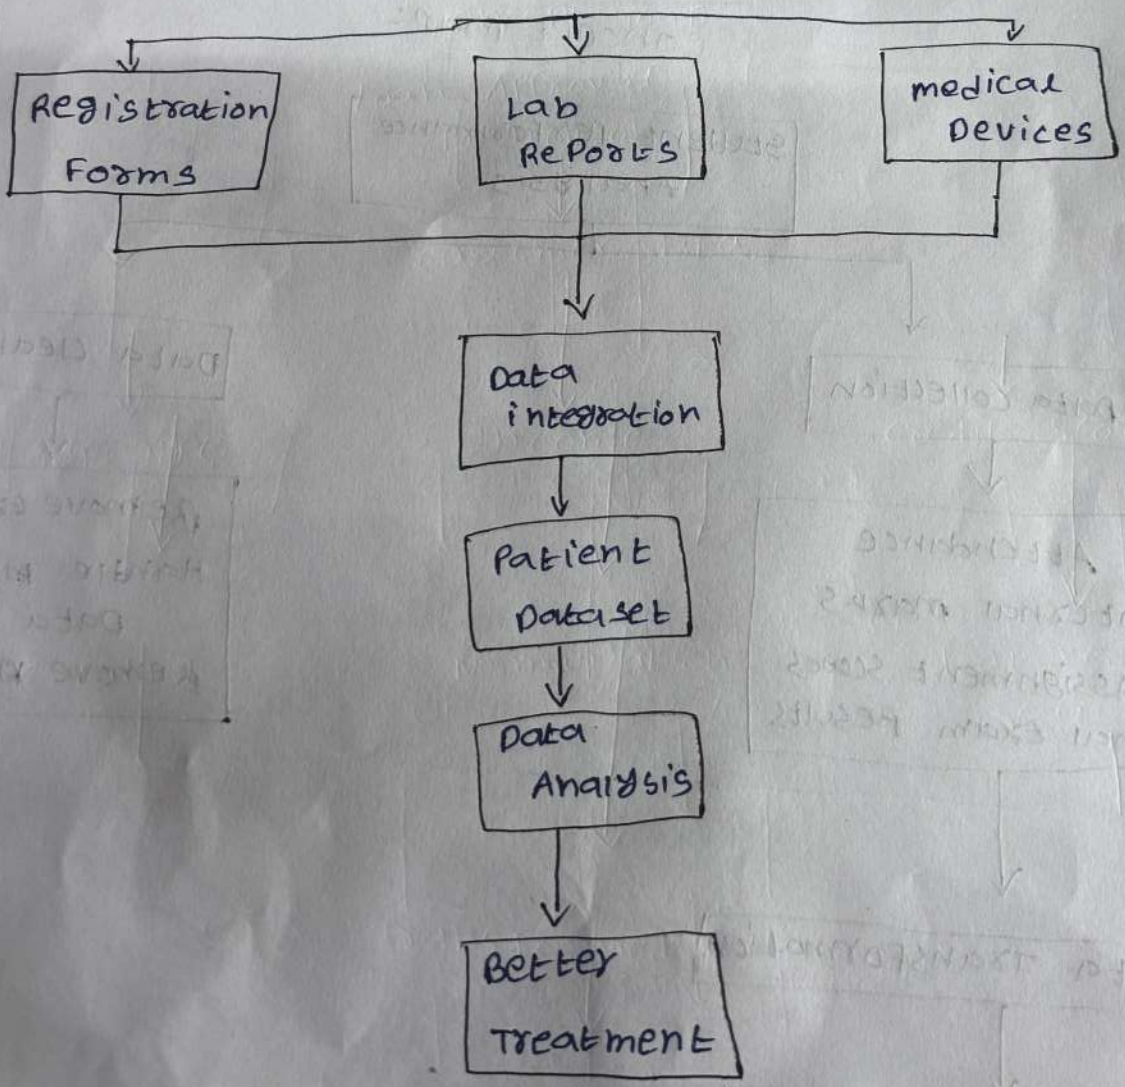

Definition:-

Data Source:- A place or system from which data is

Data integration:- combing data from different sources, into one dataset

Data Analysis:- Examining data to discover useful Patterns and information.

Concept Map:-

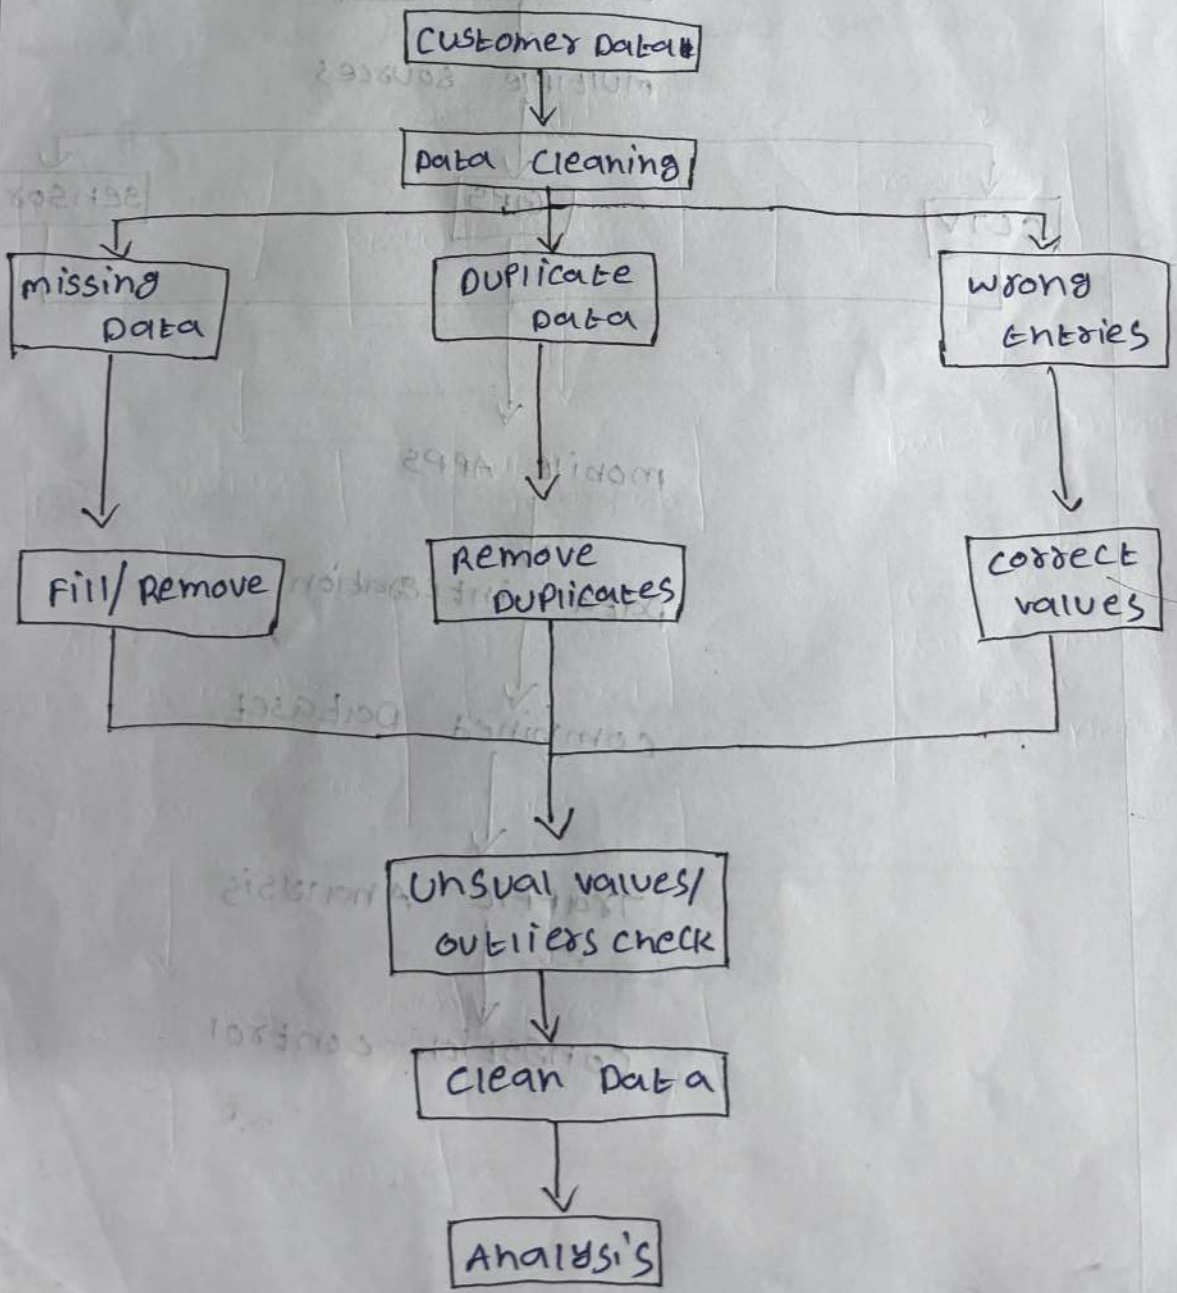

3) Online Shopping - Data Cleaning;

Data cleaning: The process of detecting and correcting duplicate, or inconsistent Data.

It improves the quality and reliability of data before analysis

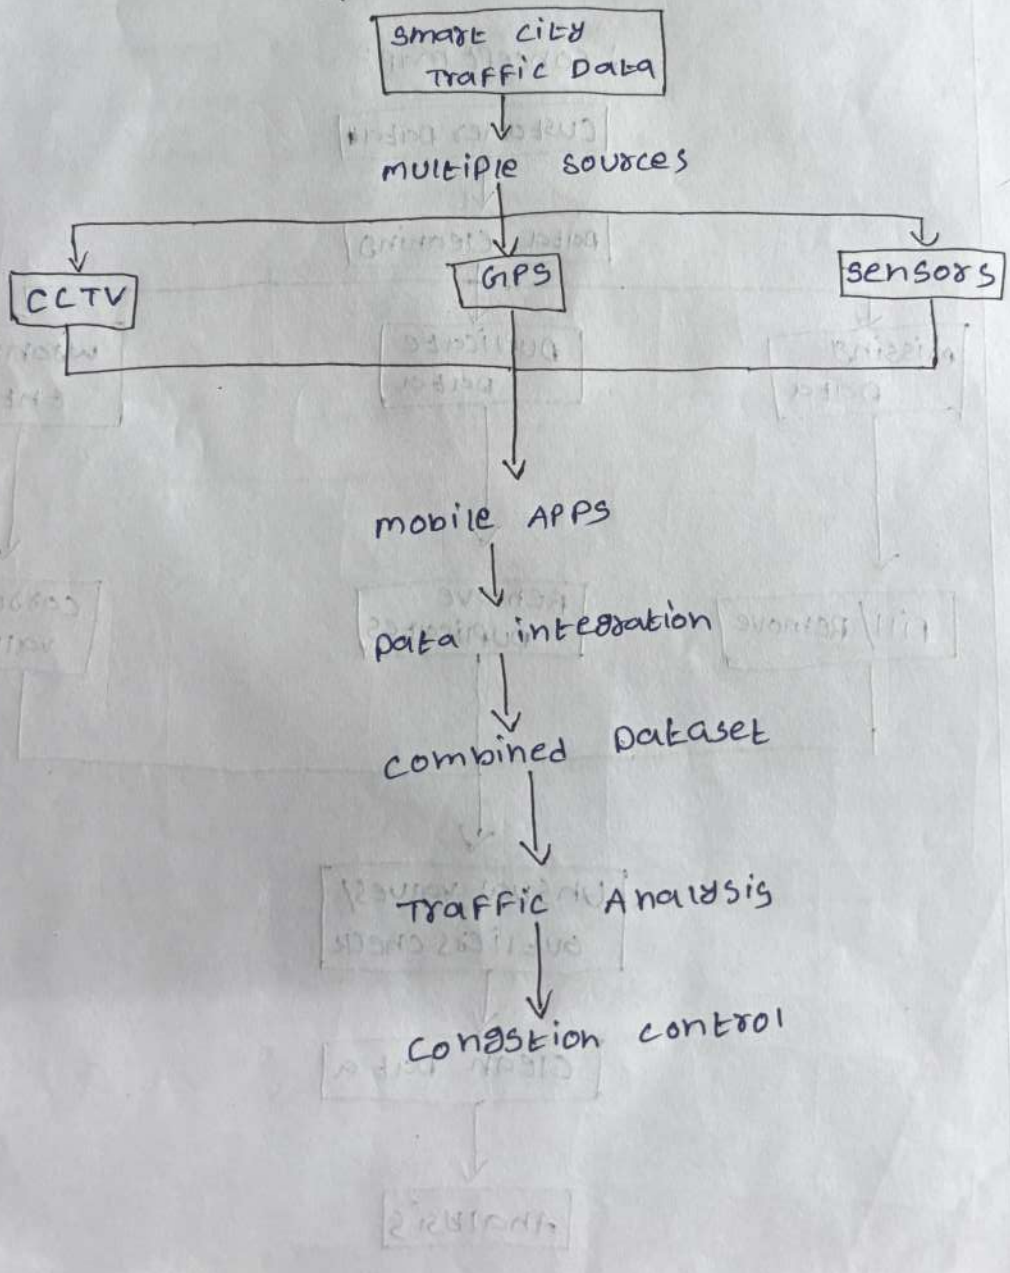

∴ Concept map :-

4) Smart city - Data integration:-

Data integration:- The process of combining data collected from multiple sources into a single consistent dataset it makes data easier to analyse and helps in better decision making

:- concept map:-

5) Bank - Loan Approval Prediction;

Definition;

Encoding;- Converting categorical data into numerical values so that machine learning algorithms can process it

Normalization;- Transforming numerical values to a common range to reduce difference in scale.

Feature scaling;- Adjusting numerical features to a similar scale for better model performance.

:Concept map:
