CO1 - AT1

Name :- O. Siddi Rishwanth

Reg. No :- 192472148

Course code :- Fundamentals of Data Science / DSAOH01

Course Faculty :- Dr. P. Umarani

O-SiddiRishwanth
192472148
DSA0401

Assignment Tool CO1:

1) A Hospital has patient records for many years How can Data science be applied

A) Data science can analyse historical patient records to identify patients in diseas, treatments, and health conditions. it can help hospitals predict diseases ore treatment decisions, and manage healthcare effectively

Ex: Predicting which patients may develop

2) A Bank wants to detect suspicious transactions How can Data science be useful?

Data science can analyze trancation data to identify freavent transactions. machine learning algorithm defect these patterns and help identify fradient

Ex: Detecting an unsual large payment from a customer's account

3) A school wants to improve student performances. mention on benefit of data science in this case.

A) Data science can analys students marks attenbance assignments, and learning patterns. It can identify students who are performing and help teachers support.

Ex: Identifying students who need extra classes

4) A transport department wants to reduce traffic How can data science be applied?

A) Data science can analyze traffic data such as vehicle counts, trave times, locations, and peak hours. By identiy the department can optimize traffic signals and suggest attenative routes

Ex: Finding roads with heavy traffic during peak hours.

5) A company has data in Excel tables, customer reviews images, and videos. which Fact of data is shown here?

A) This shows the variety facet of Data is available in different Forms such as structured data and unstructed data (review, images and videos.

Exi: Excel data, customer reviews, photos and videos

6) A univerty stores student details in rows and columns what typ of data structure is this?

A) This is structured Data. Struted data is organized in a Fixed Format using rows and colums. Each raw represent a record, while each column represents and Field or attribute

7) A company collects a very large amount of daily user activity data Forms its mobile app which Big Data characte is applied?

A) The Big Data Chadacteristic is volume. volume refers to the very largeamount of data generated, collelted, and stored by organization Large amount volumes reavire efficient and storage and technologies.

Exi: millions of user activites geneated every day..

8) A Business wants to convert customer data into useful sales decision which Big data char is important?

A) The important Big data chaaactyistic and insights from data to support bussiness decisions. Customer data can be analysed to understand and improve sales strategies.

Ex: Finding which products customers by the most

9) A company wants to process lagge datasets using parallel computation. which Big data tool can be used?

A) Apache spark can be used to process lagge datsy using padallel computation. it divides data - tasks multiple computers, allowing rapps of data to be process avickly.

Ex: Processing millions of costomer transaction avuickly

10) A company wants to visualize Big data results for decision makers tool or method can be applied?

A) Data visualization can present Big Data results through charts, graphs, dasboards, and reports. tool such as Tablecs pattern and make data driven decisions.

Ex: Showing monthly sales using a bal chart
